

Heat Pump Incentives

Templeton Municipal Light & Water Plant Can Help You Save Money While Upgrading Your Heating and Cooling Systems.

Why Should You Choose a Heat Pump?

Heat pumps are heating and cooling devices that allow homeowners the flexibility of sectioning their houses into zones with separate thermostats. Homeowners can direct the heat or cool air into the specific rooms that need it, saving money while conserving energy.

Heat pumps typically use 50% less energy than traditional heating methods. Because of their compact size, they are easy to install, and offer a quick track to savings on your heating bill.

Templeton Municipal Light & Water Plant Rebates

Cool Homes Rebate	SEER	EER	HSPF	Rebate
Air Source Heat Pump	≥16	≥12	≥8.5	\$250
Air Source Heat Pump	≥18	N/A	≥9.6	\$500
Ductless Mini Split Heat Pump	≥18	N/A	≥9.0	\$300
Ductless Mini Split Heat Pump	≥18	N/A	≥9.0	\$500

Templeton Municipal Light & Water Plant offers several different rebate options for heat pumps depending on the type and size of the device, offering a savings of \$250-\$500.

Refer to the table on the left to see how much your rebate could be if you choose to upgrade your heating system.

Additional federal tax incentives may apply. Visit www.munihelps.org for more info.
